

Shotcrete

**Are you looking for shotcrete with high capacity and flexibility?
Try a quality-controlled shotcrete with various reinforcement options.**

Tailored to your requirements

Shotcrete is a ready-mixed concrete intended for direct wet-spraying on delivery. You select the composition and properties according to your project specifications. If you require a reinforced shotcrete, it can be provided with steel and/or polypropylene fibres.

Guaranteed quality

As we produce shotcrete in our own concrete plants, we are able to monitor both incoming materials and the production process itself. You can thereby be sure that the product maintains a high and uniform quality over time.

Easy to work

Shotcrete from Betongindustri gives insignificant rebound. It is also space-saving compared to site mixed shotcrete, as you do not need a mixer or storage areas for constituent materials on the site.

Areas of application

- Temporary rock strengthening in mining or tunnel operations
- Permanent rock strengthening and surface protection in mining or tunnel construction
- Repair and refurbishing of existing concrete structures

Technical summary

- Normally available with Anläggningscement CEM I 42.5 N-SR 3 MH/LA or Anläggningscement FA CEM II/A-V 42,5 N – NSR MH/LA
